

3yrs

automation & process delivery

50%

robot productivity increase

99%

live workflow uptime maintained

3 platforms

BluePrism · UiPath · AA

Summary

RPA Consultant at EY, managing BluePrism processes for a national utility provider's billing and metering operations. Three years spanning process delivery, RPA development, and enterprise consulting — started monitoring AutomationAnywhere robots at IBM, became a full RPA builder at E-Outsource, now delivering at scale with BluePrism. Self-taught developer outside work: AI meeting transcription, automotive UI, and smart home automation. Actuarial Science background; thinks in systems and probability. Exploring agentic AI as the next frontier beyond rule-based automation.

Experience

2023 - Present · IBM → EOA → EY

2023 RPA seed planted	2024 RPA builder	2026 Enterprise consultant
IBM — monitored AutomationAnywhere robots, experimented with VBA, contributed to live automation development.	E-Outsource Asia — flipped to the builder side with UiPath and AutomationAnywhere.	EY — BluePrism at scale for a major utility provider. Agentic AI interest accelerates.

Ernst & Young · BluePrism · Utility sector		CONSULTANT
ROLE	RPA Consultant — Associate, assigned to a national utility provider engagement. Managing and monitoring BluePrism processes across billing and advanced metering infrastructure (AMI) operations.	
ACTIONS	Handles a portfolio of live BP processes including SMART Meter Billing and AMI data pipelines. Monitors robot health, triages failures, and ensures process stability across high-volume transactional workflows.	
IMPACT	Operational stability across multiple critical billing cycles. Exposure to enterprise-grade BluePrism at scale — the platform breadth here dwarfs any single process at previous roles.	

E-Outsource Asia · UiPath · AutomationAnywhere		ASSOCIATE CONSULTANT
ROLE	Associate Consultant — primary RPA developer. End-to-end ownership: process discovery, solution design, development, deployment, and post-launch monitoring across multiple client engagements.	
ACTIONS	Designed and shipped LOMAS (Logistics Management System) automation — tracking import/export liners, updating shipment plans, integrating SQL databases and APIs into robot workflows. Built e-invoice pipeline extracting data from SAP ERP, transforming to IRBM-mandated format, uploading via middleware. Developed Excel macro scripts for Purchase Order processing with cross-checking against customer records and SAPGUI posting.	
IMPACT	Process enhancements expanded workflow scope and increased robot productivity by 50%. Maintained 99% uptime on all live workflows. Quarterly SOP and documentation cycles delivered consistently.	

IBM Malaysia · AutomationAnywhere · Accounts Receivable		PROCESS DELIVERY SPECIALIST
ROLE	Process Delivery Specialist — Accounts Receivable, serving the Vietnamese market. Initially an end user, then assigned to monitor live AutomationAnywhere robots supporting the operations team.	
ACTIONS	Observed how senior developers combined RPA with Excel macros to automate AR workflows — invoice processing, payment reconciliation, aging reports. Started experimenting with VBA, built scripts that caught the team's attention, and eventually contributed to live automation development.	
IMPACT	This is where the RPA journey started — went from watching robots run to writing code that ran on them. The VBA experiments and AA monitoring exposure directly led to the EOA RPA Consultant role.	

Independent Projects

2023 - Present · self-taught builder

Automation engineer by day, tinkerer by night. Self-taught developer building tools that scratch real itches — meeting transcription, automotive UI, smart home lighting, and generative art. Gravitates toward tools that give control: self-hosting over SaaS, local LLMs over cloud-only APIs, CLIs over GUIs.

Meeting Min

Python · Whisper · Ollama · SSH · Docker

Self-hosted bilingual meeting minutes bot. Captures audio from Microsoft Teams, pipes through [Whisper](#) for speech-to-text (auto-detects Malay and English), generates structured summaries via LLM. Designed for locked-down corporate environments — audio captured locally, processed on remote server via SSH tunneling. [github.com/j00bi/meeting-min](#)

Mazda AIO

HTML · CSS · JavaScript · React · Vite

Custom speedometer dashboards and instrument cluster UIs for the [Mazda Connect CMU](#) head unit (2015 Mazda 2). Includes real-time driving data visualization and a React multi-screen app prototype. Exploration of embedded systems, CAN bus data, and automotive UI design on production hardware.

RAG Demo

Python · ChromaDB · Ollama · FastAPI

Chat with your PDFs — a Retrieval-Augmented Generation system that lets you upload documents and ask questions about their content. Uses [ChromaDB](#) for vector storage and Ollama for local LLM inference. Self-hosted, privacy-first, Dockerized. [github.com/j00bi/rag-demo](#)

Yeelight Backlight

Python · NumPy · MSS · TCP

Real-time monitor ambient lighting — captures screen edges, averages colors, sends commands to a [Yeelight bslamp3](#) over LAN TCP. Iterated through 6 versions solving TCP buffer overflow (threaded sender + drop queue), temporal smoothing, dark mode fallback, and adaptive rate limiting. [github.com/j00bi/yeelight-backlight](#)

Celestial Clock

HTML Canvas · JavaScript · REST API

Full-screen canvas rendering a prayer-synced sky — gradients tied to actual Islamic prayer times (Fajr, Sunrise, Dhuhr, Asr, Maghrib, Isha) via Aladhan API. Features [sun arc](#), moon with phase rendering, twinkling stars, and layered mountain silhouettes.

Bursa Sector Catalyst

Research · Data Analysis

Sector-based catalyst analysis model for [Bursa Malaysia](#). Applies actuarial probability thinking to stock market sector rotation patterns. Early research phase — stalled in favor of active RPA work and AI exploration.

BUILDER INSTINCT Every project starts with "I wish this existed" and ends with something running on actual hardware — a car head unit, a living room lamp, a Teams meeting. The through-line is the same: understand the system from the inside, then automate it.

Core Skills

RPA PLATFORMS

Production experience across [BluePrism](#), [UiPath](#), and [AutomationAnywhere](#) — from process discovery to deployment and monitoring at enterprise scale.

INTEGRATION

SQL databases, REST APIs, SAP ERP, and IRBM middleware. Built end-to-end pipelines from [data extraction](#) through [transformation](#) to [upload](#).

LANGUAGES

Python, JavaScript, VB.Net, PowerShell, SQL. HTML/CSS/JS for frontend projects. [Python](#) is the primary language for personal projects and automation scripting.

AI & LLMS

Whisper STT, Ollama (local LLMs), RAG pipelines with ChromaDB, prompt engineering, bilingual MY/EN NLP. Running Hermes as [daily AI assistant](#) — building agentic workflows.

INFRASTRUCTURE

[Docker](#) containerization, SSH tunneling, Oracle Cloud deployment, FastAPI backends, REST API integration. Self-hosting over SaaS by default.

DOCUMENTATION

SOPs, user guides, FSD, SDD, SIT test scripts, technical READMEs. Quarterly documentation cycles at EOA delivered consistently across engagements.

Education

UiTM Shah Alam · BSc (Hons) Actuarial Science · Probability and systems thinking carries into every technical decision

2022
